WATER & SODIUM CHLORIDE FOR INJECTION

Water for Injection

Sterile Water for Injections is used for preparation of a medicine intended for injection or infusion by slow drip into a vein. It is only to be used for this purpose and should not be injected without the inclusion of medicine.

Sodium Chloride for Injection

Sodium Chloride Injection 0.9% is a sterile isotonic solution of sodium chloride in water for injections, pH4.5-7.0, containing no preservatives (normal saline). Used as the vehicle for many parenteral drugs and as an electrolyte replenisher for maintenance or replacement of deficits of extracellular fluid. It can also be used as a sterile irrigation medium.
